

A360 ASSET MANAGER

AI-powered digital asset management solution that greatly extends the lifecycle of molds and other high-value industrial assets.

WHAT IT DOES

1

MONITORS

Real-time monitoring of asset performance, utilization and efficiency.

2

PREDICTS

Failure prediction and anomaly detection to avoid asset downtime.

3

WARNS

Built-in early warnings for risks, failures and quality issues.

4

IMPROVES

Higher operational excellence and better capacity and budget planning.

one of our
global clients
is saving
\$25 million
with A360.

HOW IT WORKS

Data Gathering

Sensors/Tags Attached to Machines or Molds

- IoT sensor data
- Computer vision
- Event data
- Digital forms
- ERP/SCM data
- Other data

Data Processing & Learning

Visibility into Asset Health Conditions

- Performance monitoring
- Condition monitoring and maintenance requirements
- Quality production output
- Scrap percentage
- Labor productivity

Insight & Decision Support

Alert & Optimize Asset Health

- Tuning and adjustments
- Predictive maintenance planning and scheduling
- Inventory and repair parts planning
- Production capacity impact and planning
- Labor planning

Cognitive Automation

Automate Workflow & Self-Correction

- Automatically adjust based on threshold
- Process and workflow automation
- Maintenance scheduling automation
